Introducción

Teniendo en cuenta que en la publicación de los científicos chinos de la revista Lancet del 22 de febrero 2020 ellos mismos reconocen que crearon un genoma por consenso de forma artificial utilizando al menos 3 softwares y sacando datos del Genbank de internet.

Que luego de esa publicación ningún país o institución del mundo ha podido aislar, ni secuenciar de forma real, ni cultivar el supuesto Sars-Cov 2. Que por lo tanto el virus no existe en la naturaleza ni circula entre los seres humanos.

Que la OMS prohibió hacer autopsias a todos los países.

Martín

Que el médico italiano Pasquale Bacco realizó 400 autopsias en junio julio agosto de 2020 en pacientes diagnosticados covid, pero no encontró en pulmón daños compatibles con neumonía viral, sino que encontró microcoágulos diseminados en pulmón.

Que en los pacientes que sufren tromboembolismo pulmonar masivo esta contraindicada la intubación.

Que el señor Bill Gates estableció un nivel de censura total en las redes para que no se escuchara a médicos y científicos disidentes.

Que en una residencia murieron 86 abuelos en 6 horas en España.

En Washington murieron 80 abuelos en una residencia en 4 horas.

Que los abuelos habían sido vacunados previamente con la vacuna antigripal 2019-2020.

Que el informe Barbastro demostró que habían fallecido los abuelos que estaban vacunados.

Que la vacuna antigripal llevaba grafeno, análisis de Ricardo Delgado.

Que una vez comenzado el año 2021 y la Campaña de Vacunación, se empezaron a elevar las estadísticas de muertes en los países que informan.

Que empezamos a ver serios daños por la vacuna, neurodegeneración, convulsiones, Alzheimer, trombosis, arritmias, muertes súbitas, parálisis ceguera, mielitis encefalitis, hemorragias, las pérdidas de los embarazos se multiplicaron por 6800. Que simultáneamente empezamos a observar el fenómeno del magnetismo en los vacunados.

Que observamos además que los vacunados emiten un código bluetooth.

Que enseguida forzaron a la población a una segunda dosis, luego a una tercera, luego a una cuarta...

Que el señor Bill Gates y el señor Klaus Schwab tienen una obsesión por reducir la población mundial. Que en junio de 2021 el Profesor Pablo Campra constató la presencia de grafeno en un vial de Pfizer, lo cual fue ratificado en noviembre 2021 con viales de Astrazeneca, Moderna, Jansenn y Pfizer.

Que los investigadores chilenos constataron la presencia grafeno en los viales de Sinovac, Astrazeneca y Pfizer.

Que así mismo en Estados Unidos la Dra Carrie Madej, la Dra Jane Ruby, el científico Robert Young constataron la presencia de grafeno en los viales.

Que también en Estados Unidos la Dra Zandre Botta constató la presencia de microburbujas de garfeno en la sangre de los vacunados, al igual que los científicos franceses que encontraron grafeno en las muestras de sangre.

Que los científicos alemanes encontraron grafeno al analizar viales y en sangre de los vacunados.

Que Japón retiró 2.600.000 viales de moderna por contener partículas metálicas magnéticas.

Que los Ministros de Salud de Argentina no han contestado nuestras preguntas en referencia al contenido de los viales.

El Congreso de la Nación sancionó una ley otorgando confidencialidad sobre el contenido e impunidad a los laboratorios por cualquier daño que pudieran causar las vacunas.

Nuestro Presidente de la Nación declaró que Argentina era uno de los 10 países elegidos para experimentar con la población.

Que la ANMAT no analizó un solo vial.

Que en argentina han muerto mas de 30 niños un día después de la vacuna.

En todo el mundo se evidencia a diario como deportistas profesionales se desploman o se descompensan en plena actividad deportiva.

Que los gobiernos y los medios están tapando todo. Por todo ello hemos decidido hacer nuestra propia investigación sobre el contenido de viales de Pfizer, Astrazéneca, Sputnik, Sinopharm y Cansino.

Método de Análisis

01

Microscopio

Se trabajo con microscopio marca NIKON,
modelo ECLIPSE 50i.

Los aumentos utilizados para la observación
fueron de 100x 200x y 400x,1000x

02

Observaciones

Hemos observado muestras de gota fresca
en directo , utilizando cubre objeto en
algunas ocasiones.

ENERO 2022

CANSINO

1 Vial analizado

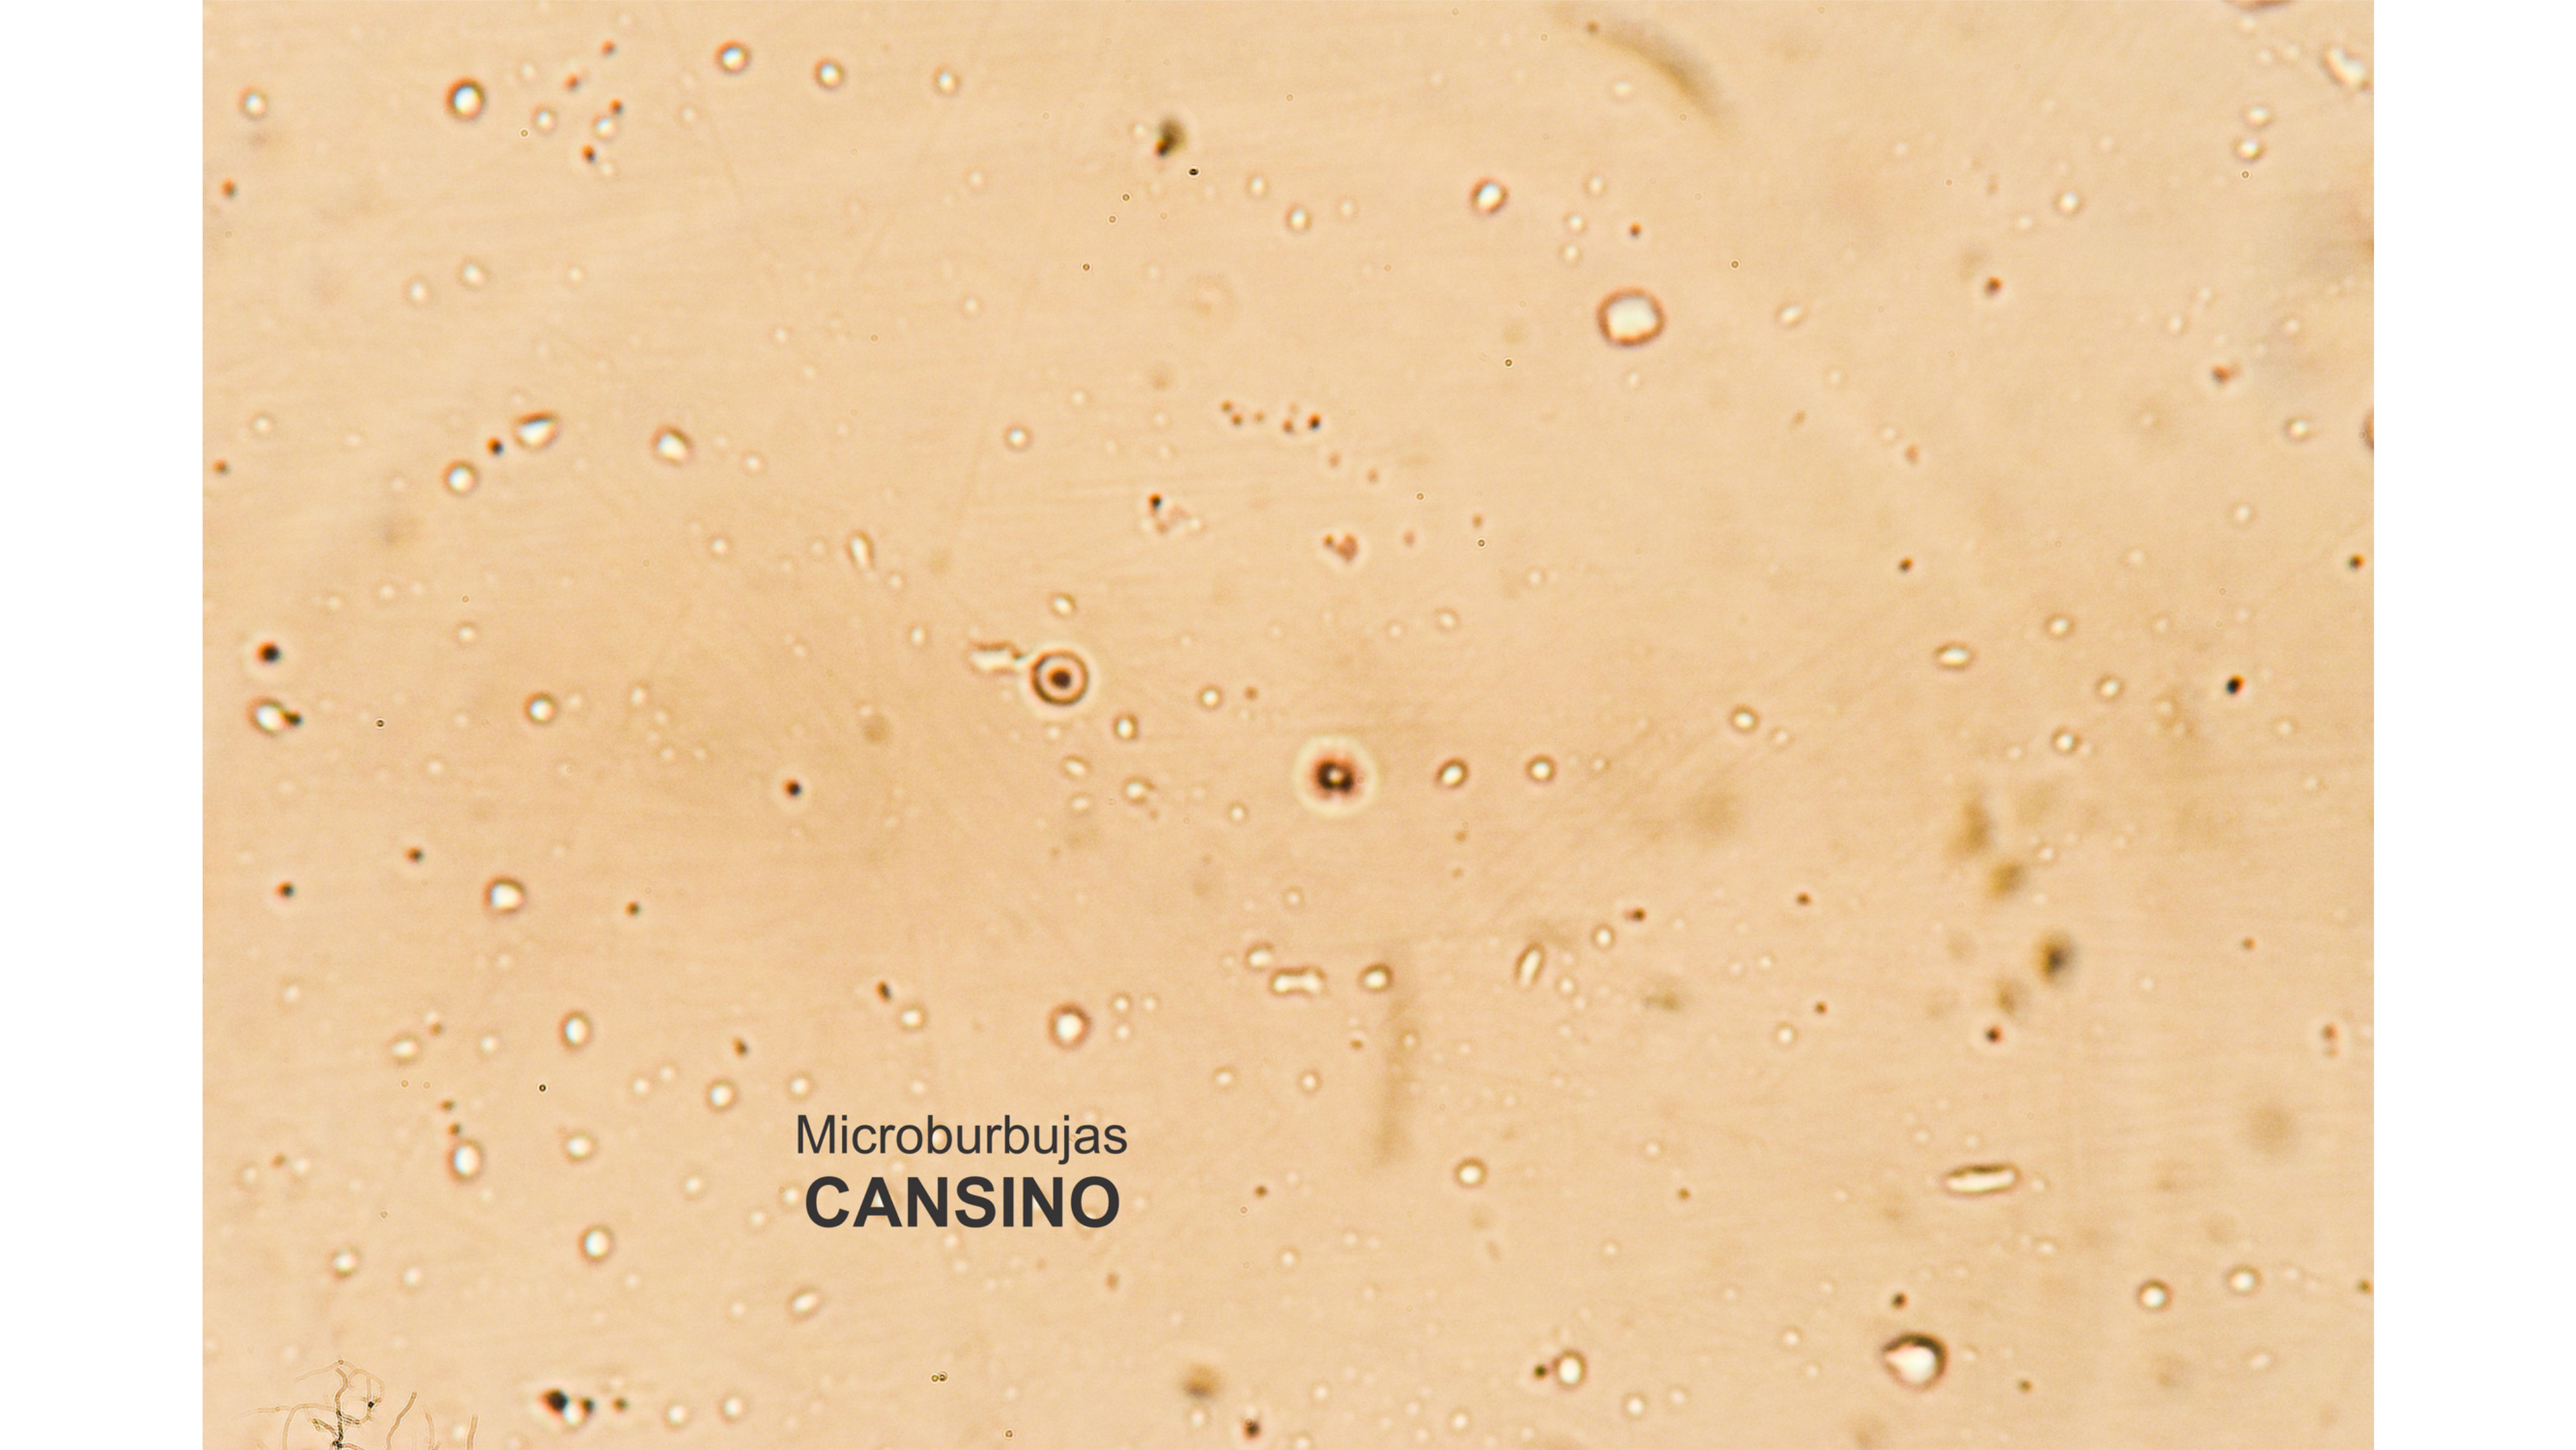

A microscopic image showing the tip of a graphite pencil lead. The lead tip is dark and has a complex, multi-faceted structure with various facets and edges. The background is a light, textured surface, possibly paper or a substrate. The text "Grafeno CANSINO" is overlaid on the right side of the image.

Grafeno
CANSINO

A microscopic image showing numerous microbubbles of various sizes and shapes dispersed in a light brown, slightly textured liquid medium. Some bubbles are spherical, while others are elongated or teardrop-shaped. A prominent, larger, teardrop-shaped bubble is visible on the left side. The text "Microburbujas CANSINO" is overlaid in the center-left area.

Microburbujas
CANSINO

Microburbujas
CANSINO

An aerial photograph showing a vast field of birds, likely a flock of shorebirds, gathered on a flat, open landscape. The birds are densely packed in some areas, particularly along a diagonal path or ridge that runs from the bottom left towards the top right. The overall color palette is dominated by warm, earthy tones like orange, brown, and tan, with some darker patches of vegetation or water visible. The text 'Grafeno CANSINO' is overlaid in white on the right side of the image.

Grafeno
CANSINO

Grafeno y Burbujas
CANSINO

A high-resolution scanning tunneling microscopy (STM) image of a graphene crystal. The image shows a large, flat, two-dimensional lattice of carbon atoms, appearing as a dense, textured surface with a characteristic honeycomb-like structure. A prominent feature is a large, dark, irregularly shaped defect or hole in the center of the crystal, where the lattice structure is disrupted. The surrounding area is a uniform, textured surface of the graphene lattice. The text "Grafeno CANSINO" is overlaid on the right side of the image.

Grafeno
CANSINO

Grafeno
CANSINO

A high-resolution scanning tunneling microscopy (STM) image of a graphene lattice. The image shows a dense, hexagonal arrangement of carbon atoms, appearing as a complex, textured pattern of brown and orange tones. A central defect is visible, where the regular lattice structure is disrupted, forming a dark, irregular shape. The overall appearance is that of a highly ordered, crystalline material with a subtle, repeating pattern.

PFIZER

1 Vial analizado

Microcircuito
PFIZER

A circular microscopic view showing a liquid surface with two dark, spherical microbubbles. The background is a light, textured surface, likely graphene. The bubbles are positioned near the center of the frame, with one slightly larger than the other. The overall image has a warm, yellowish tint.

Microburbujas Grafeno
PFIZER

Grafeno
PFIZER

Grafeno
PFIZER

A microscopic image showing a yellowish-brown background with several small, circular microbubbles. The bubbles vary in size and some have a distinct reddish-pink hue. The overall appearance is that of a liquid suspension of small particles.

Microburbujas Grafeno
PFIZER

A microscopic image showing a dense field of small, spherical microbubbles. The bubbles vary in size and color, with some appearing as small, faint dots and others as larger, more distinct spheres with iridescent or multi-colored surfaces. The background is a light, yellowish-tan color. The text 'Microburbujas Grafeno' and 'PFIZER' is overlaid on the lower-left portion of the image.

Microburbujas y Grafeno
PFIZER

Grafeno
PFIZER

A microscopic image of a cell, likely a yeast or similar microorganism, stained with a pink dye. The cell has a large, irregularly shaped nucleus containing a dense, yellowish granular structure. The cytoplasm is filled with numerous smaller, yellowish granules and some smaller, dark spots. The overall appearance is that of a single-celled organism with internal organelles.

Grafeno
PFIZER

A microscopic view of a textured surface, likely a material like graphene, showing a complex network of circular and irregular patterns. The surface is covered with numerous small, circular features, some of which are highlighted with vibrant, multi-colored spots (red, green, blue, yellow). The overall appearance is that of a highly detailed, porous, or crystalline structure. The background is a light grayish-blue color.

Grafeno
PFIZER

A microscopic image showing a dense field of small, circular, translucent structures, likely graphene microbubbles. The structures are arranged in a somewhat regular pattern, with some larger, more complex structures visible. The background is a light gray, textured surface. The text "Microburbujas Grafeno" and "PFIZER" is overlaid on the bottom right of the image.

ENERO 2022

ASTRAZÉNECA

1 Vial analizado

Grafeno
AZTRAZENECA

A circular microscopic image showing a grey, textured surface of graphene. Several small, irregularly shaped flakes are highlighted with a blue and yellow border. The text 'Grafeno ASTRAZÉNECA' is centered in the lower half of the image.

Grafeno
ASTRAZÉNECA

Grafeno
ASTRAZÉNECA

Cinta de Grafeno
ASTRAZÉNECA

A microscopic image showing a thin, vertical strip of material with a yellow and blue interference pattern, likely graphene, on a grey substrate. The strip is surrounded by a dense field of small, circular particles. A larger, irregularly shaped cluster of similar particles is visible on the right side of the image.

Grafeno
ASTRAZÉNECA

Cinta de Grafeno
ASTRAZÉNECA

Microburbujas
ASTRAZÉNECA

A microscopic image showing several long, thin, yellowish-brown ribbons of graphene. The ribbons are oriented diagonally across the frame, from the bottom left towards the top right. They have a textured, fibrous appearance with some internal structure visible. The background is a light gray, slightly mottled surface with some small, dark, irregular spots and faint, elongated shapes, possibly other graphene fragments or contaminants. The lighting is even, highlighting the edges and texture of the ribbons.

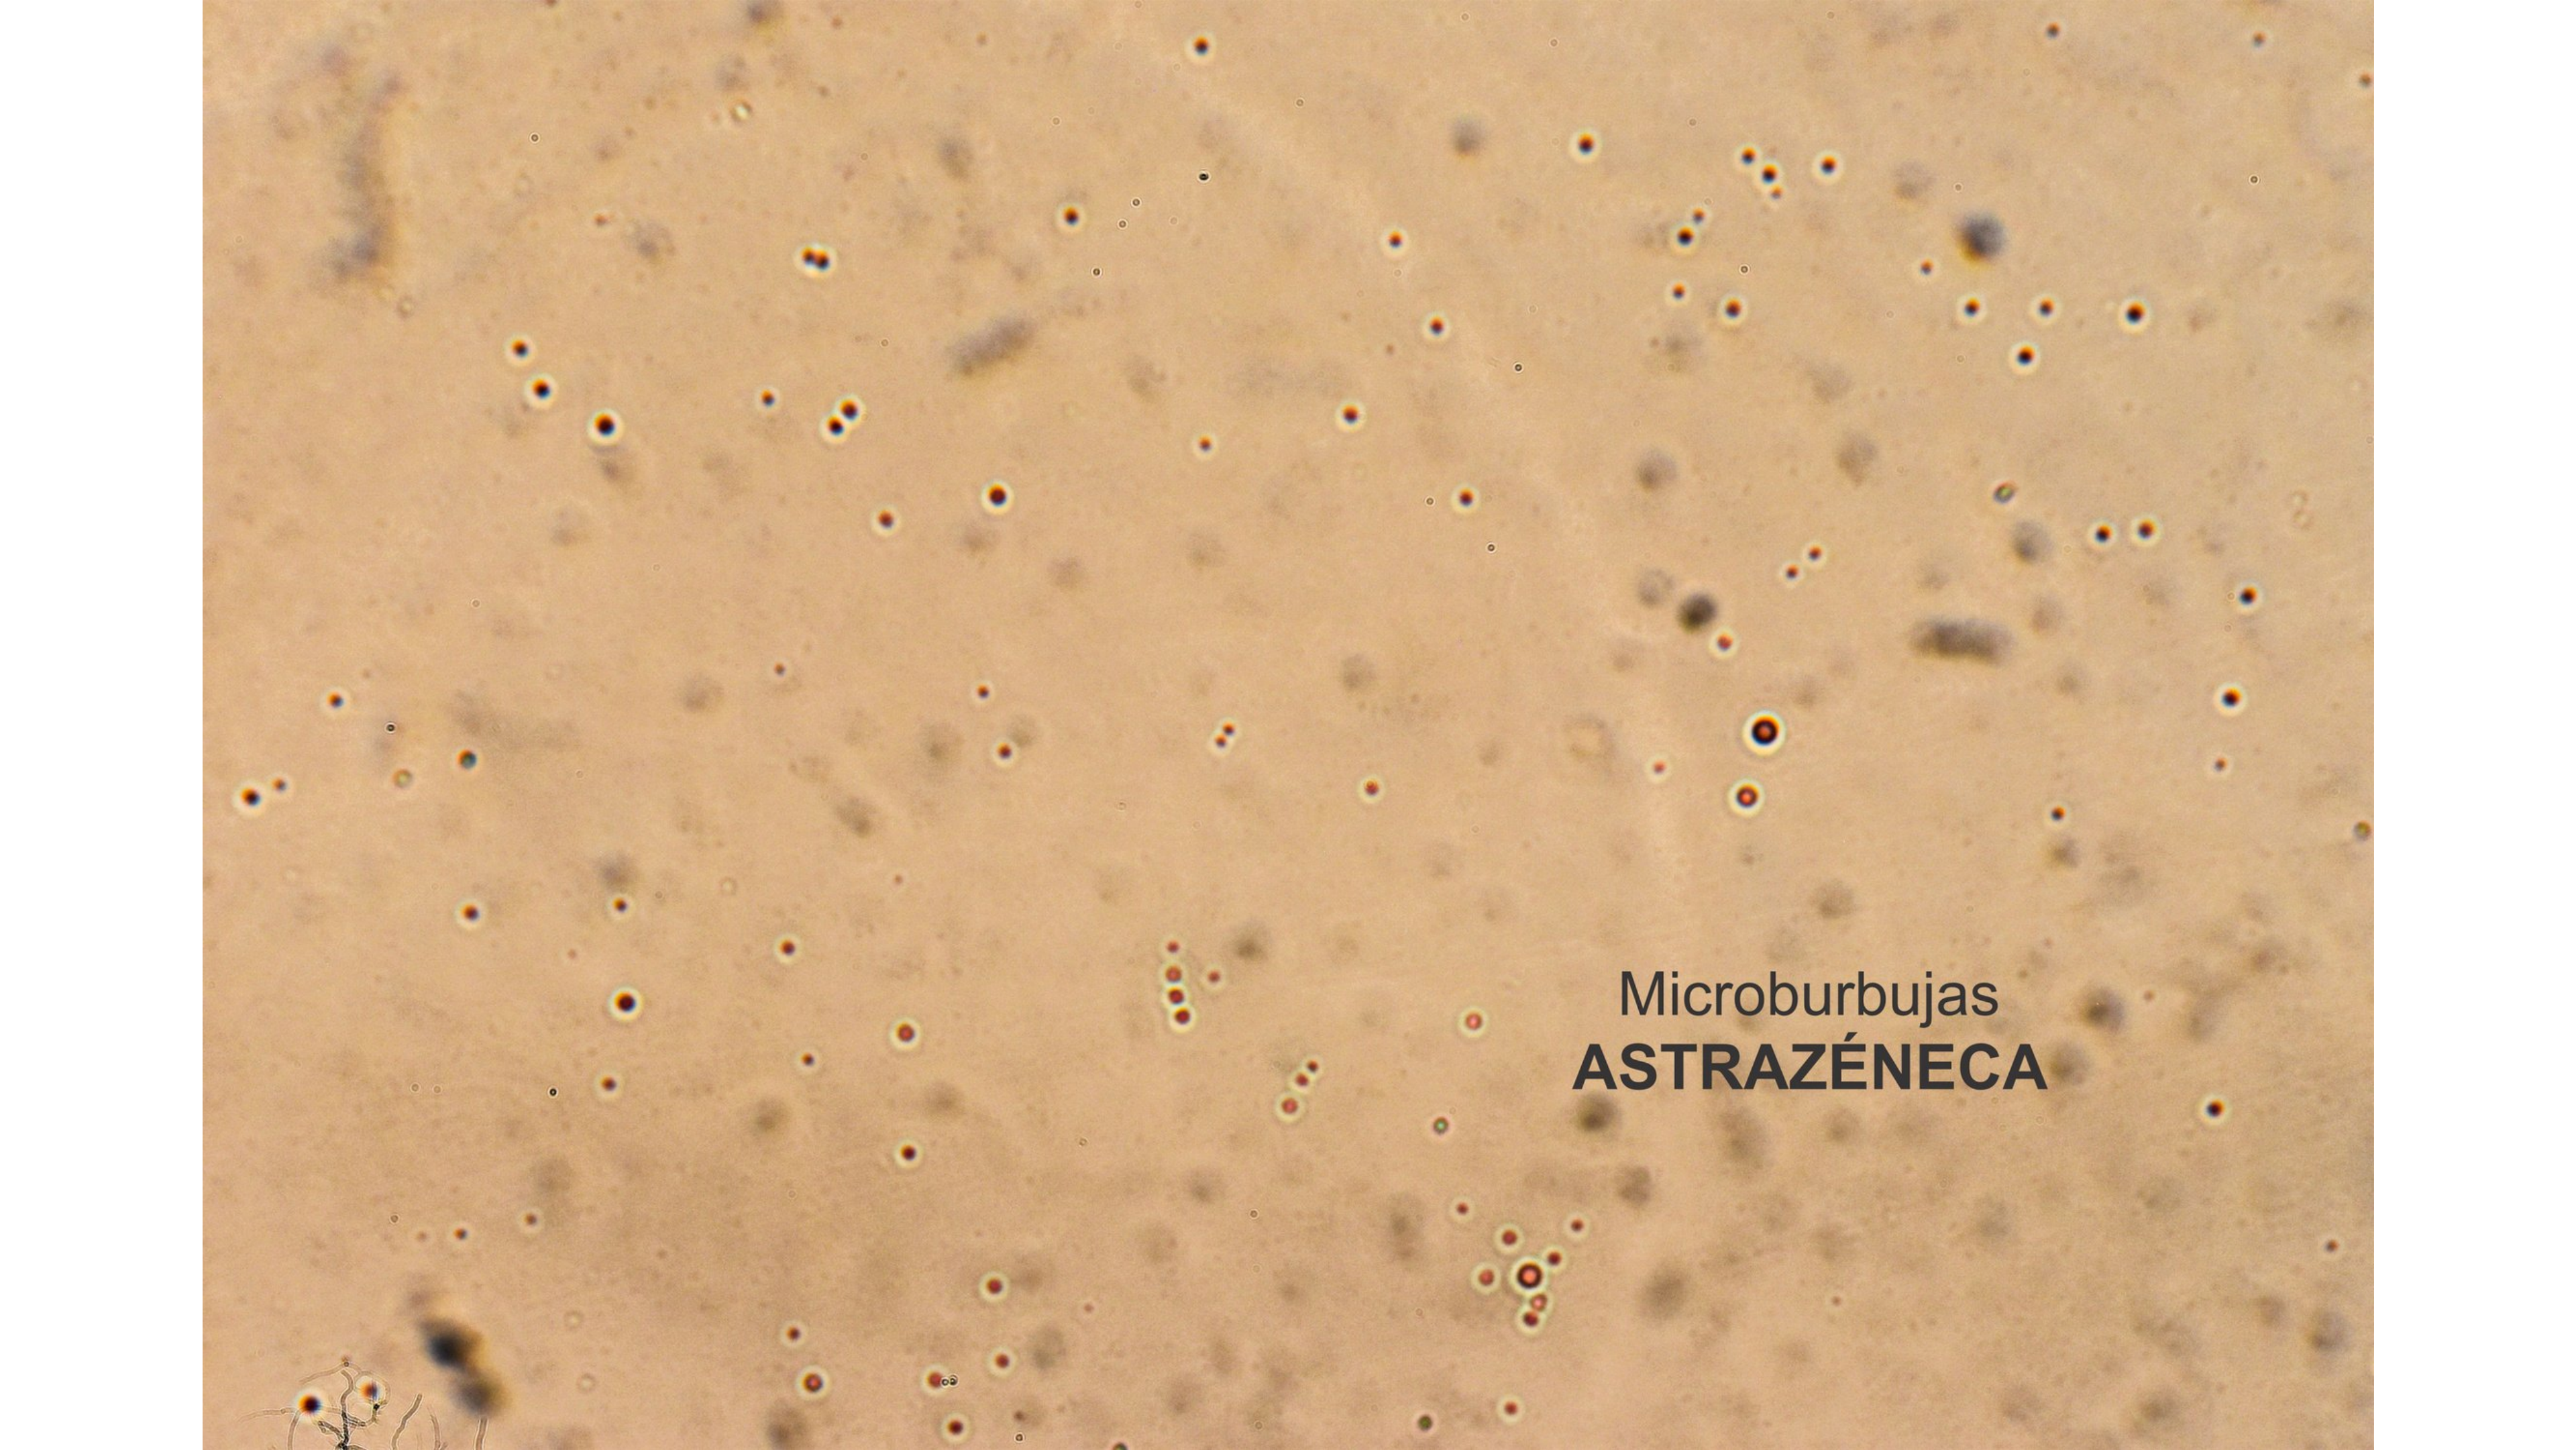

Cinta de Grafeno
ASTRAZÉNECA

Cinta de Grafeno
ASTRAZÉNECA

Grafeno y Microcircuito
ASTRAZÉNECA

A microscopic view of water showing numerous small, dark-centered bubbles. The bubbles are scattered across the field of view, with some appearing in small clusters. The background is a light, slightly hazy brownish-tan color. The text "Microburbujas ASTRAZÉNECA" is overlaid in the lower right quadrant.

Microburbujas
ASTRAZÉNECA

A grayscale microscopic image of a microcircuit. A prominent vertical strip of yellow and blue material runs through the center. The surrounding area is filled with various small, dark, circular and rectangular features, likely representing microbubbles or other components of the circuit. The overall texture is grainy and detailed.

Microburbujas y Microcircuito
ASTRAZÉNECA

ASTRAZÉNECA

Grafeno
ASTRAZÉNECA

A microscopic image showing a single, long, thin graphene ribbon. The ribbon is highlighted with a blue and yellow border, making it stand out against the grey background. The ribbon has a distinct head-like structure at one end and a tail-like structure at the other. The background is filled with various small, dark, irregular shapes, likely other particles or debris.

Cinta de Grafeno
ASTRAZÉNECA

A microscopic image showing a graphene butterfly structure. The structure is a complex, interconnected network of thin, translucent layers that exhibit iridescent colors, primarily purple and yellow, due to light interference. The background is a light gray, textured surface with various small, dark spots and fibers. The text "Mariposa de Grafeno" is positioned above the word "ASTRAZÉNECA" in a bold, black, sans-serif font.

SINOPHARM

2 viales analizados

Grafeno y Microburbujas
SINOPHARM

A microscopic image showing a long, thin, and slightly curved strip of graphene. The strip exhibits a characteristic rainbow-like color pattern, likely due to interference of light. It is set against a background of a textured, brownish substrate, possibly a copper foil or a similar material used in the synthesis of graphene. The overall appearance is that of a single layer of carbon atoms arranged in a hexagonal lattice.

Grafeno
SINOPHARM

Grafeno
SINOPHARM

Microcircuito
SINOPHARM

Grafeno
SINOPHARM

A microscopic image showing a microcircuit with a graphene layer. The background is a light brown, textured surface. A large, dark, irregularly shaped region in the lower center represents the graphene layer. To its left, a smaller, rectangular, light-colored region is visible. Numerous small, dark, circular spots are scattered across the surface, likely representing individual atoms or molecules. The text "Microcircuito y Grafeno" is centered in the upper half, and "SINOPHARM" is centered below it in a larger, bold font.

Microcircuito y Grafeno
SINOPHARM

A microscopic image showing a microcircuit with a graphene layer. The background is a light brown, textured surface. A prominent feature is a dark, irregularly shaped, multi-layered structure in the lower center, which is the graphene layer. To its left is a rectangular, light-colored structure. Numerous small, dark, circular spots are scattered across the surface, likely representing individual atoms or molecules. The text "Microcircuito y Grafeno" is centered in the upper right, and "SINOPHARM" is centered below it in a larger, bold font.

Microcircuito y Grafeno
SINOPHARM

A microscopic view of a microcircuit component on a substrate. The substrate is a light brown, textured material. A thick, black, curved line runs across the image, likely representing a microchannel or a boundary. A small, rectangular, purple-colored component is attached to the substrate, positioned near the black line. The background is filled with numerous small, yellowish, oval-shaped particles, possibly cells or debris.

SINOPHARM

A microscopic image showing a central cluster of large, faceted, light-colored crystals. The crystals have sharp edges and flat surfaces, characteristic of a crystalline solid. The central cluster is surrounded by a dense field of smaller, more irregularly shaped crystals of the same material. The background is a uniform, light-colored medium. The overall appearance is that of a crystalline precipitate or a sample of a crystalline material under a microscope.
